ANIMALS 

Express Publishing

LET'S START!

Our planet is a place of many wonders, especially when it comes to animals. You might think you know about most of the creatures on our planet, but there are numerous animals that we don't see or hear about often.

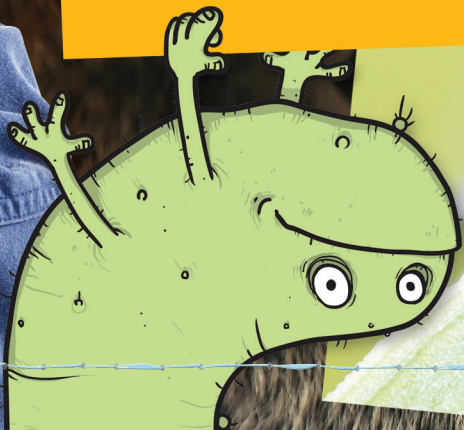

Some of them look as though they are from another planet altogether, but believe it or not, they live with us here on Earth.

Prepare yourself for some very strange sights!

4

MINIBEASTS

Minibeasts are small animals such as insects or spiders. Although they are small, most people are scared of these 'creepy crawlies'!

The **panda ant** is not actually an ant, it's a wasp. It gets its name from its black and white colour. Panda ants have got a very painful sting that is capable of bringing down a cow and other animals much bigger than them! You can find them mostly in the USA and Mexico.

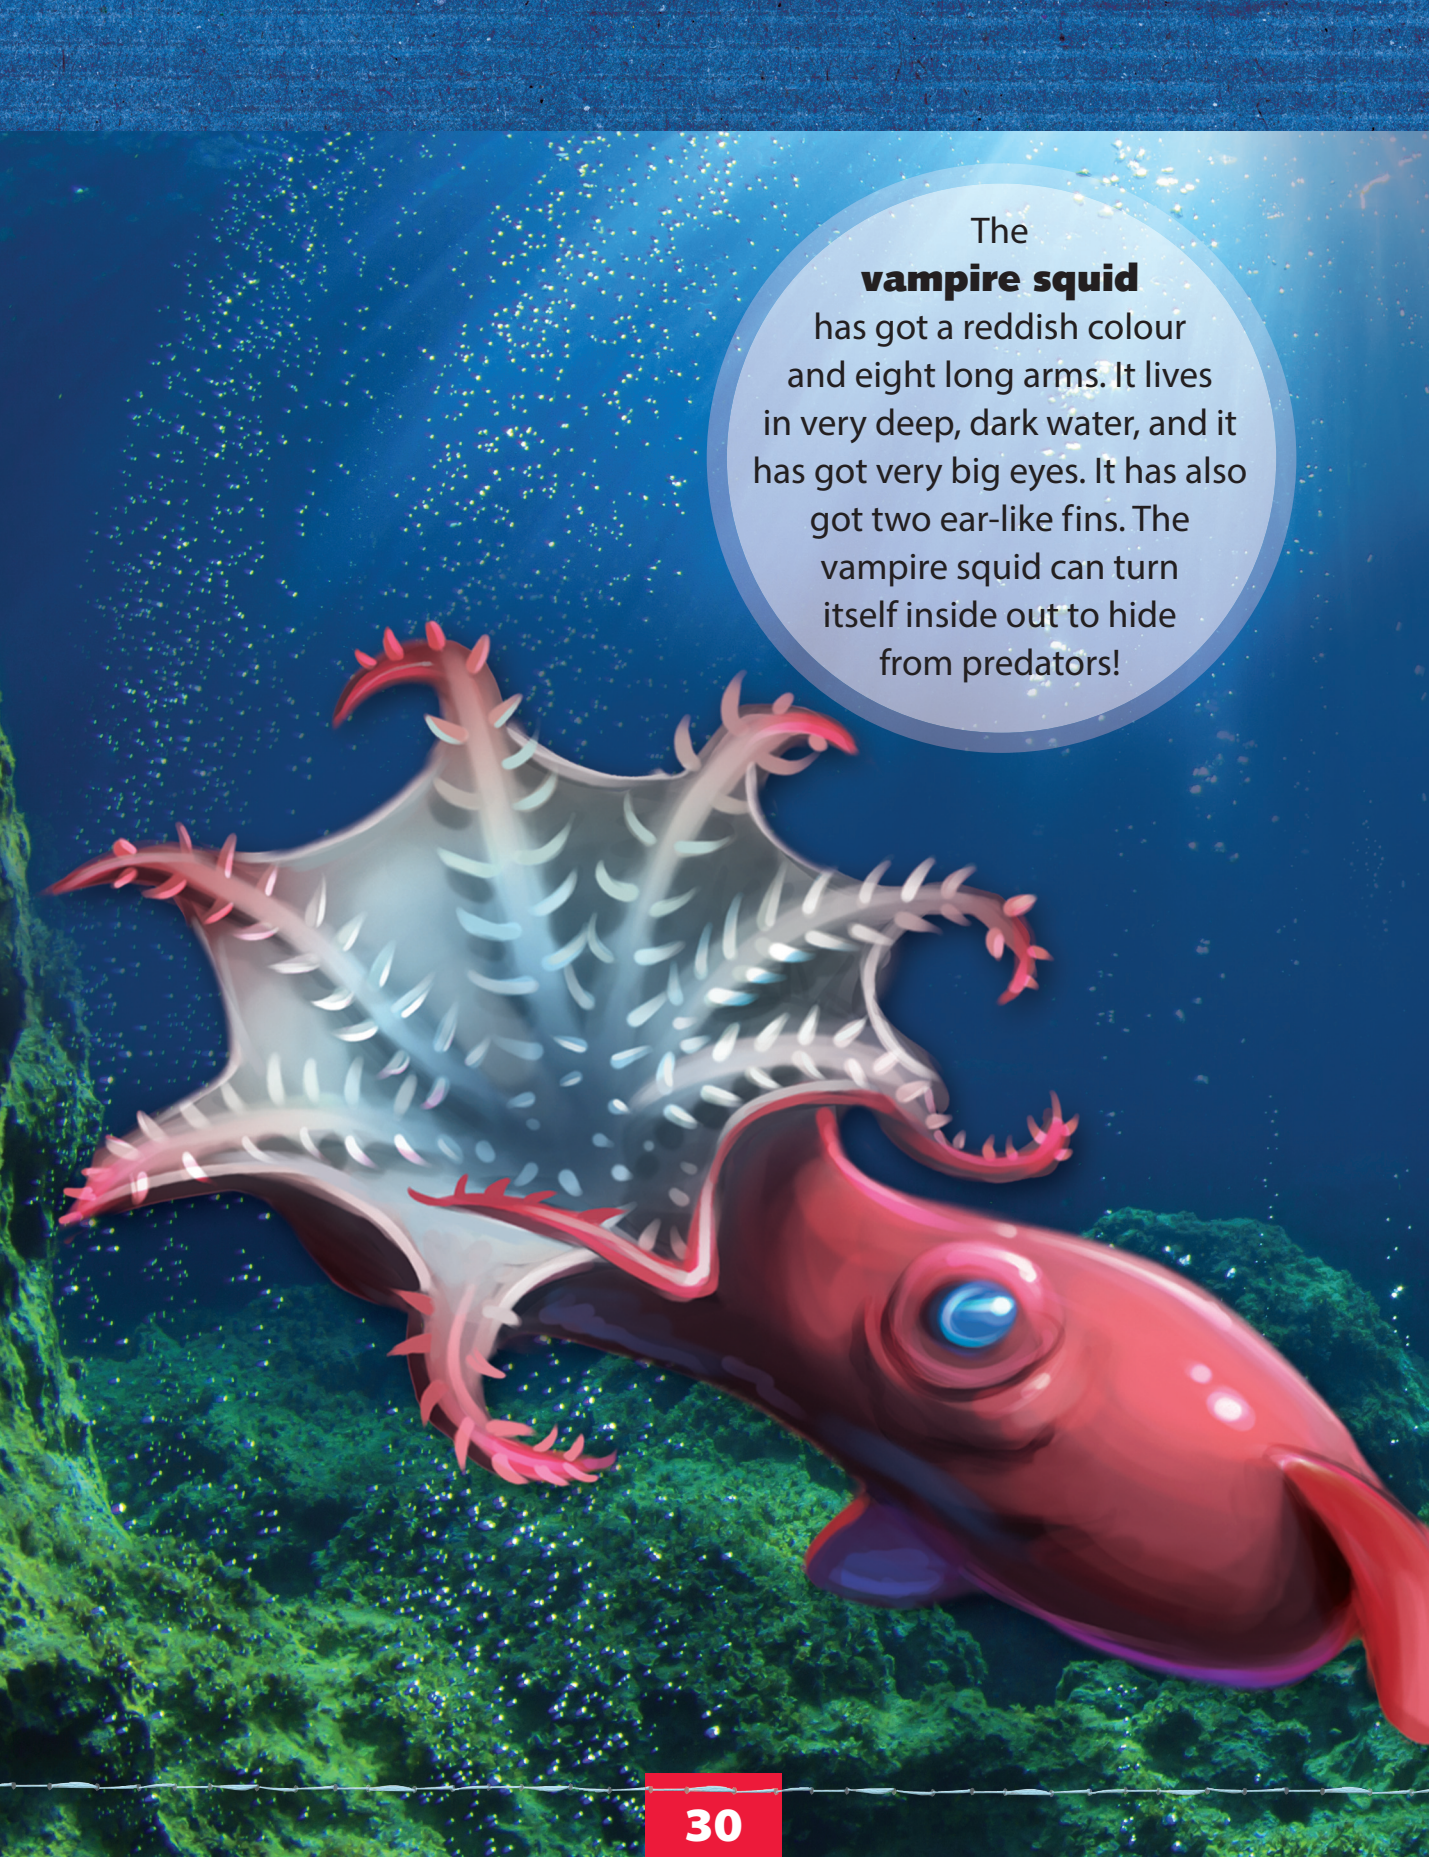

This is a **Venezuelan poodle moth**. It was discovered only a few years ago and is a very rare sight. It looks like something from a cartoon with its fluffy body and long 'eyebrows'! Scientists don't know a lot about it, but they do agree that there are many strange insects we still haven't discovered yet.

This is a **Mwanza flat-headed agama** from Africa. Because of its unusual colouring, it is also called the Spider-Man lizard! It likes to sit on rocks out in the sun, but it can climb walls just like the superhero! The male can change to a brown colour at night or when it is scared.

FAST FACT

The cobra only needs to eat every couple of months!

The
vampire squid
has got a reddish colour
and eight long arms. It lives
in very deep, dark water, and it
has got very big eyes. It has also
got two ear-like fins. The
vampire squid can turn
itself inside out to hide
from predators!

WEIRD ANIMALS

Explore our World CLIL Readers are graded readers from levels 1-6. They cover a range of subjects and themes, promoting Content and Language Integrated Learning (CLIL).

Weird Animals (Science) puts the spotlight on some of the strange and unusual creatures of the animal kingdom.

- What's the fastest-eating animal in the world?
- Which monkey looks like a super hero?
- Which animals are called the vacuum cleaners of the sea?

Components:

- Reader with DIGI MATERIAL cross-platform application (iOS, Android, Windows, MacOSX)

Level 1
300 headwords

Level 2
450 headwords

Level 3
